Zhijing Wu

Computer Science Undergraduate, Sichuan University

zhijingwu.cs@gmail.com | zhijingwu.github.io | github.com/ZhijingWu

Education

Sichuan University Chengdu, China
B.Eng. in Computer Science *Sep. 2025 – Expected Jun. 2030*

- Overall GPA: **3.88/4.00**; Compulsory-course GPA: **4.00/4.00**; Compulsory-course average: **94.7/100**; Rank: **2/288**.

Research Interests

LLM Agent Planning and Structured Reasoning; Agent Memory and Experience-Based Learning; Multi-Agent Coordination and Communication; Execution-Grounded Evaluation and Reliability.

Publications

Jinghong Tang, **Zhijing Wu**, Yikun Liu, Wei Ju, and Jiyao Wang. "Hyperbolic Self-Supervised Pretraining for Hierarchical EEG Representation Learning in Generalizable Parkinson's Disease Detection." *IEEE BIBM 2026*. **Regular Paper, Accepted**.

Selected Research Projects

LATS Action and Value Interface Reliability | *Independent Execution Audit* 2026

- Audited action-output and evaluator-score interfaces in a pinned LATS/WebShop implementation, combining one bounded real-model trace, frozen-prompt probes, and offline parser checks.
- A format instruction changed command compliance from **0/15 to 15/15** sampled completions, all `think[...]` without navigation; at a 300-token cap, **3/6** complete evaluator scores disagreed with native extraction. No task-success gain was established.

Execution-Semantics Audit of Guided Topology Diffusion | *Independent Multi-Agent Study* 2026

- Traced generated communication graphs through runtime construction and message passing in the released GTD/GSM8K pipeline.
- Across **603 records**, controlled coordinate canonicalization increased mean raw-to-executed edge Jaccard from **0.152 to 0.863**; downstream performance gains were not established.

Trust-Metadata Inheritance in LLM Agent Memory | *Independent ExpeL Study* 2026

- Audited ExpeL memory-update semantics through a deterministic inherit-vs.-reset support-metadata ablation, preserving rule contents.
- Resetting support moved an edited rule from **rank 2 to rank 15**; a **50-task paired WebShop** study was inconclusive (**0/50 vs. 1/50** successes).

Within-Step Corruption Timing for Computer-Use Agents | *AgentHijack Extension* 2026

- Studied controlled pre-observation, post-observation/pre-execution, and post-execution perturbations with trajectory logging.
- Across **3 Chrome tasks and 36 primary runs**, post-observation/pre-execution changes increased mean episode length by **+4.00, +1.75, +1.00** steps; no specification violation was established.

Communication-Cost and Workflow-Latency Calibration | *ProtocolBench Study* 2026

- Profiled A2A, ACP, ANP, and Agora RPC paths across 1–100 KiB payloads (**480/480** measured requests) and **120 no-op workflows** (480 additional RPCs).
- Serial workflow latency difference was predicted as -0.156 **ms** and measured as $+0.828$ **ms**; parallel comparisons were execution-order sensitive.

Awards & Honors

- **First Prize (Sichuan Division)**, National College Student Mathematics Competition, 2026.
- **Meritorious Winner (M Award)**, Mathematical Contest in Modeling (MCM), May 2026.

Technical Skills

Programming / ML: Python, C/C++, PyTorch, PyTorch Geometric, Transformers
Agents / Graph: LLM Agents, Tree Search, GCN, GraphSAGE, GAT, Message Passing, Trajectory Analysis
Systems / Evaluation: Linux, Git, Docker, Conda, RPC Profiling, Controlled Experiments
